

COMPOST TEA BREWING INSTRUCTIONS

SUPPLIES:

- 1- 5 gallon bucket
- 4 gallons of water
- Aquarium Hose
- 1-gallon nylon bag
- Unsulfured Molasses
- Liquid Kelp and Fish Emulsion

STEP 1:

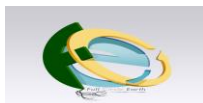

Connect the air hose to the air stone and the aquarium pump. Place the air stone inside the bucket.

STEP 2:

Put good quality finished compost into the 1-gallon nylon bag. Coil wire around the top of the bag, and twist using pliers to secure.

COMPOST TEA BREWING INSTRUCTIONS

STEP 3:

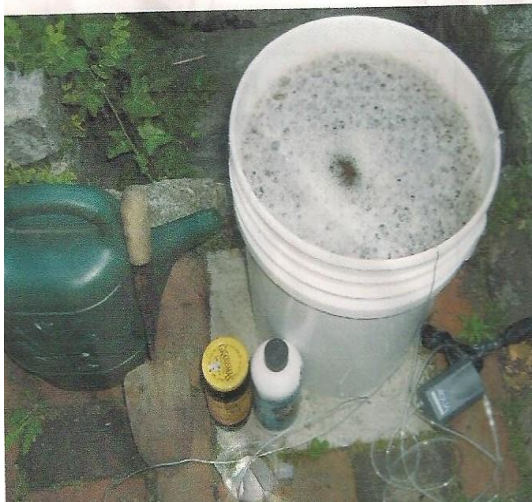

Hang the compost bag 3” above the air stone and bend the wire over the rim of the bucket to suspend the bag. This will allow the air to bubble through the compost.

Fill the bucket with 4 gallons of rain water. If using tap water, aerate for one hour to gas off the chlorine.

STEP 4:

Plug in the aquarium pump for the air to bubble. Add one ounce of unsulfured molasses.

STEP 5:

Let it aerate for 48 hours until it has foamed on the top. Your compost tea is now ready to use!

*For evergreens, add 1 ounce of liquid fish and kelp emulsion a few hours before the tea is complete.
