

Using Hansen Solubility Parameters (HSP) to Identify Safer Solvents

Morose, Gregory, Giarrosso, Abigail

Solvents with toxic properties are used for numerous applications: adhesives, spot removers, coatings, paint thinners, dry cleaning, nail polish removers, etc. TURI in partnership with UMass Lowell faculty and students are utilizing the Hansen Solubility Parameters in Practice (HSPiP) Software to identify safer solvent and solvent blends to provide safer alternatives to the use of toxic solvents.
