

# Guidance for Reporting Per- and Poly-Fluoroalkyl Substances (PFAS) under the Toxics Use Reduction Act (TURA), including Individually Listed PFAS and the Certain PFAS Not Otherwise Listed (NOL) Category

Per- and Poly-Fluoroalkyl Substances (PFAS) are a very large group of chemicals, currently totaling over 10,000, with continually evolving regulatory requirements. Continuing updates to the Toxics Release Inventory (TRI) under the 2020 National Defense Authorization Act (NDAA) affect TURA reporting requirements. Some PFAS are reportable individually and some are reportable under either the TURA C1 - C4 Halogenated Hydrocarbons NOL category or the TURA Certain PFAS NOL category or both:

PFAS are reportable individually under TURA when (a) they are individually listed under TRI (Table 1) and (b) if they were already reportable under TURA (Table 2).

PFAS are reportable as part of a category as part of (a) the C1-C4 NOL category (Table 3), and (b) the new Certain PFAS NOL category (Table 4).

For the 2021 Reporting Year, 172 Individual PFAS were added to the TURA list, after being added to TRI. These individually added PFAS have a reporting threshold of 100 lb each and are listed in [Table 1](#) below. **Note that EPA is CONTINUALLY ADDING to this list, including seventeen already identified PFAS, listed toward the end of [Table 4](#), in gray.** The first eight PFAS in gray at the end of Table 4 have been added to TURA individually for reporting year **2023**. The remaining nine PFAS in gray are awaiting Administrative Council vote. **Report all seventeen as part of the TURA Certain PFAS NOL category for reporting year 2022.**

For the 2022 Reporting Year, the Certain PFAS NOL category will be added under TURA. The Certain PFAS NOL category is defined as those PFAS that contain:

- a perfluoroalkyl moiety<sup>1</sup> with three or more carbons (e.g.,  $-C_nF_{2n}-$ ,  $n \geq 3$ ; or  $CF_3-C_nF_{2n}-$ ,  $n \geq 2$ )
- a perfluoroalkylether moiety with two or more carbons (e.g.,  $-C_nF_{2n}OC_mF_{2m}-$  or  $-C_nF_{2n}OC_mF_m-$ ,  $n$  and  $m \geq 1$ )

wherein for the example structures shown, the dash (–) is not a bond to a hydrogen and may represent a straight or branched structure, and that are not otherwise listed.

Reporting of this Certain PFAS NOL category is at typical TURA thresholds of 25,000 pounds manufactured or processed and 10,000 pounds otherwise used annually. There is a large group of PFAS that meet this definition.

<sup>1</sup> “In organic chemistry, a **moiety** is a part of a molecule that is given a name because it is identified as a part of other molecules as well. ”Source: Moiety (chemistry) - Wikipedia

All chemicals meeting the above Certain PFAS NOL definition are reportable as part of the category unless they are individually listed under TURA. The lists of PFAS with CAS registry numbers in this guidance are provided to assist filers, but are not exhaustive.

[Table 1](#) below lists PFAS that are individually reportable under TURA at the 100 lb threshold, after TURA adopted the TRI NDAA listings.

[Table 2](#) below lists PFAS that were already individually reportable under TURA. Continue to report them at typical reporting thresholds.

[Table 3](#) lists PFAS that are reportable under the TURA C1-C4 Halogenated Hydrocarbons category. The substances shaded in gray at the bottom are **ALSO** reportable under the new Certain PFAS NOL TURA category. Report **BOTH** C1-C4 Halogenated Hydrocarbons **AND** Certain PFAS NOL for the substances in gray. Only one fee will be due.

[Table 4](#) lists PFAS that are reportable under the Certain PFAS NOL category only. Substances in gray have recently been added by TRI at a 100 lb/year threshold. TURA has adopted these changes for reporting year 2023. Report under TURA as part of Certain PFAS NOL for reporting year 2022.

The lists in Tables 2-4 were generated from PFAS that are known to be in commerce, primarily from the Toxic Substances Control Act (TSCA). Thus, these lists are **NOT** exhaustive. Approximately 1/3 of the PFAS in commerce, as noted by the TSCA Chemical Data Reporting (CDR), are claimed as Confidential Business Information (CBI) and thus will require the supplier to disclose whether the substance meets the definition.

PFAS are often on SDSs without CAS numbers or a full chemical name (i.e., they may be identified as 'fluoropolymer' or some more general language). For that reason, it is important to contact suppliers to find out whether PFAS are in the products used. OTA has developed [a supplier notification letter template](#) for this purpose.

Note that some PFAS are in products at concentrations below the de minimis<sup>2</sup> exemption amount (1% for most PFAS, 0.1% for PFOA as a carcinogen). These quantities do not need to be counted when determining if the reporting threshold has been met.

For fluorinated substances where a chemical structure is not available it should be assumed to be part of the category until more specific information is available.

---

<sup>2</sup> In determining the amount or quantity of a toxic substance manufactured, processed, or otherwise used at a facility, the toxics user shall not consider the amount of the toxic substance if it is present in a mixture in concentrations equal to or below the de minimus concentration for that toxic substance set forth in 40 CFR Part 372.38(a); provided, however, that this de minimis exemption shall not apply for any toxic or hazardous substance specified as a chemical of special concern in 40 CFR Part 372.28.

Normal article exemptions<sup>3</sup> apply for PFAS. For example, PTFE pellets being processed, such as in extrusion processes, would be reportable, as would PTFE coating emulsions. Teflon articles, such as Teflon tape or spacers, would likely meet the article exemption.
