

Moving towards zero exposure  
in the global electronics supply  
chain -

Update on the multi-  
stakeholder initiative  
**CLEAN ELECTRONICS  
PRODUCTION NETWORK  
(CEPN)**

Ted Smith, Coordinator  
International Campaign for  
responsible technology

# Setting the Context

- We take an industry sector approach that focuses in the most important industry – Tech
- Production is now completely globalized – brands hold the power, outsourcing production to low wage countries this also outsources the hazards and people suffer
- Trade wars are making things worse –US - China rivalry is heating up – 2 Internets?
- Rise of authoritarianism and massive protests around the world
- Climate change is here and now and is getting worse very fast – floods and fire, sea rise
- We are currently focusing on one of the key parts of the life cycle – Production -- a broader global coalition is necessary if we want to include mining and e-waste
- Our focus on OSH is a strategy to encourage the phase out of the most hazardous chemicals in the global supply chain
- There are new opportunities for collaboration with industry insiders - CEPN

# Background: Chemicals used in Electronics -

Researchers working with International Campaign for Responsible Technology developed a list of 1109 chemicals known to be used in production — many were identified as very hazardous:

- 330 are acutely toxic
- 32 are carcinogens
- 60 are endocrine disruptors
- 41 are germ cell mutagens
- 46 are reproductive toxins

Source: ICRT, ETBC in collaboration with Northwestern University and Greenpeace researchers, 2020, incorporated into PHAROS

GREEN AMERICA

**CLEAN ELECTRONICS  
PRODUCTION NETWORK**

A project of the Center for Sustainability Solutions

# Clean Electronics Production Network & Toward Zero Exposure

# CLEAN ELECTRONICS PRODUCTION NETWORK (CEPN)

*A program of Green America  
Center for Sustainability Solutions*

CEPN is a global, leadership network of diverse stakeholders collaborating to reduce worker exposure to toxic chemicals in the electronics supply chain - a complex issue that no individual business, organization, or leader can solve alone.

# Participating Organizations

---

## Industry

Apple, Inc.  
Cisco Systems, Inc.  
Dell, Inc.  
Fairphone  
Flex  
HP, Inc.  
Intel Corporation  
Inventec Performance Chemicals  
Responsible Business Alliance  
Seagate Technology

---

## Labor

CEREAL (El Centro de Reflexión y Acción Laboral)  
Electronics Watch  
Int'l Campaign for Responsible Technology (ICRT)  
Social Accountability International (SAI)

---

## Research

University of California, Berkeley  
Santa Clara University  
University of Mass, Lowell – Toxics Use Reduction Institute (TURI)

## Enviro/Other

ChemFORWARD  
Clean Production Action (CPA)  
Scivera  
Sustainable Purchasing Leadership Council (SPLC)  
TCO Development  
US EPA

---

# CEPN WORKING GOAL

Move toward zero exposure of workers to toxic chemicals in the electronics manufacturing process.

## SCOPE

### CHEMICAL FOCUS

Process chemicals

### HAZARD & EXPOSURE FOCUS

reducing both hazard and exposure

### DOOR-TO-DOOR FOCUS

includes exposure during usage, handling, and disposal of chemicals

# Process Chemicals & Why Important?

- Process Chemicals are used during the manufacture of a product and/or maintenance of related production equipment that are not intentionally fully incorporated into the product
- Millions of workers in the electronics global supply chain using process chemicals
- Increasing focus on process chemicals including potential purchasing requirements and regulations
- Process chemicals increasing being viewed as a human rights issue

# Why a Network Approach?

- Process chemical management is an industry-wide issue
- Companies share a supply base with other brands, so collaboration is critical to success
- By working together network members are able to make a bigger impact and do it faster

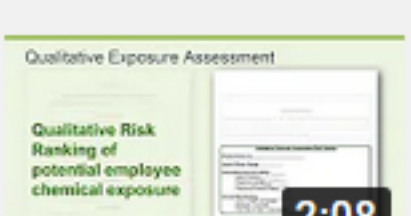

# Tools & Resources Developed by CEPN

- Process Chemicals Data Collection (PCDC) Tool
- Qualitative Exposure Assessment (QEA)
- Alternatives Assessment Guide
- Resources for Safer Alternatives

Free and publicly available via the [CEPN website](#), as well as the [RBA E-Learning Academy](#)!

# Qualitative Exposure Assessment (QEA)

- Developed to help facilities identify potential risk of worker exposure when workplace chemical exposure data is not available
- Consists of simple forms and detailed instructions for documenting chemical use, hazards control systems, and worker tasks
- Can be completed by EHS staff with limited industrial hygiene expertise
- Generates a risk ranking that can be used to determine necessary controls, ways to improve performance, and reduce exposure risk
- Guidance and collection form available in English, Chinese and Spanish
- Training videos also available in English, Chinese and Spanish

1	 Exposure Controls Utilized to control exposure to hazardous substances 5:18	<b>Section 1 COLLECT</b> EN Emma Green America
2	 STOP No Safety Data Sheet? Read the Safety Data Sheet Check for necessary Safety Data Sheets before proceeding 1:57	<b>Section 2 IDENTIFY</b> EN Emma Green America
3	 Exposure Rating 5:08	<b>Section 3 CALCULATE</b> EN Emma Green America
4	 Recommendations and Action Plan: Unacceptable High to Very High 4:25	<b>Section 4 RECOMMEND</b> EN Emma Green America
5	 Qualitative Exposure Assessment Qualitative Risk Ranking of potential employee chemical exposure 2:08	<b>SupplierNet Learning Intro</b> EN Emma Green America

# Alternatives Assessment Guide

- Concise, high-level guide for identifying and evaluating potential substitutions for chemicals of high concern used in electronics manufacturing processes
- Intended to allow companies to assess safer alternatives while avoiding regrettable substitutions
- Includes guidance for evaluating:
  - Human health and environmental impacts
  - Technical feasibility
  - Lifecycle thinking
  - Social impacts
  - Availability
  - Cost of potential alternatives
- Guide and worksheet available in English and Chinese

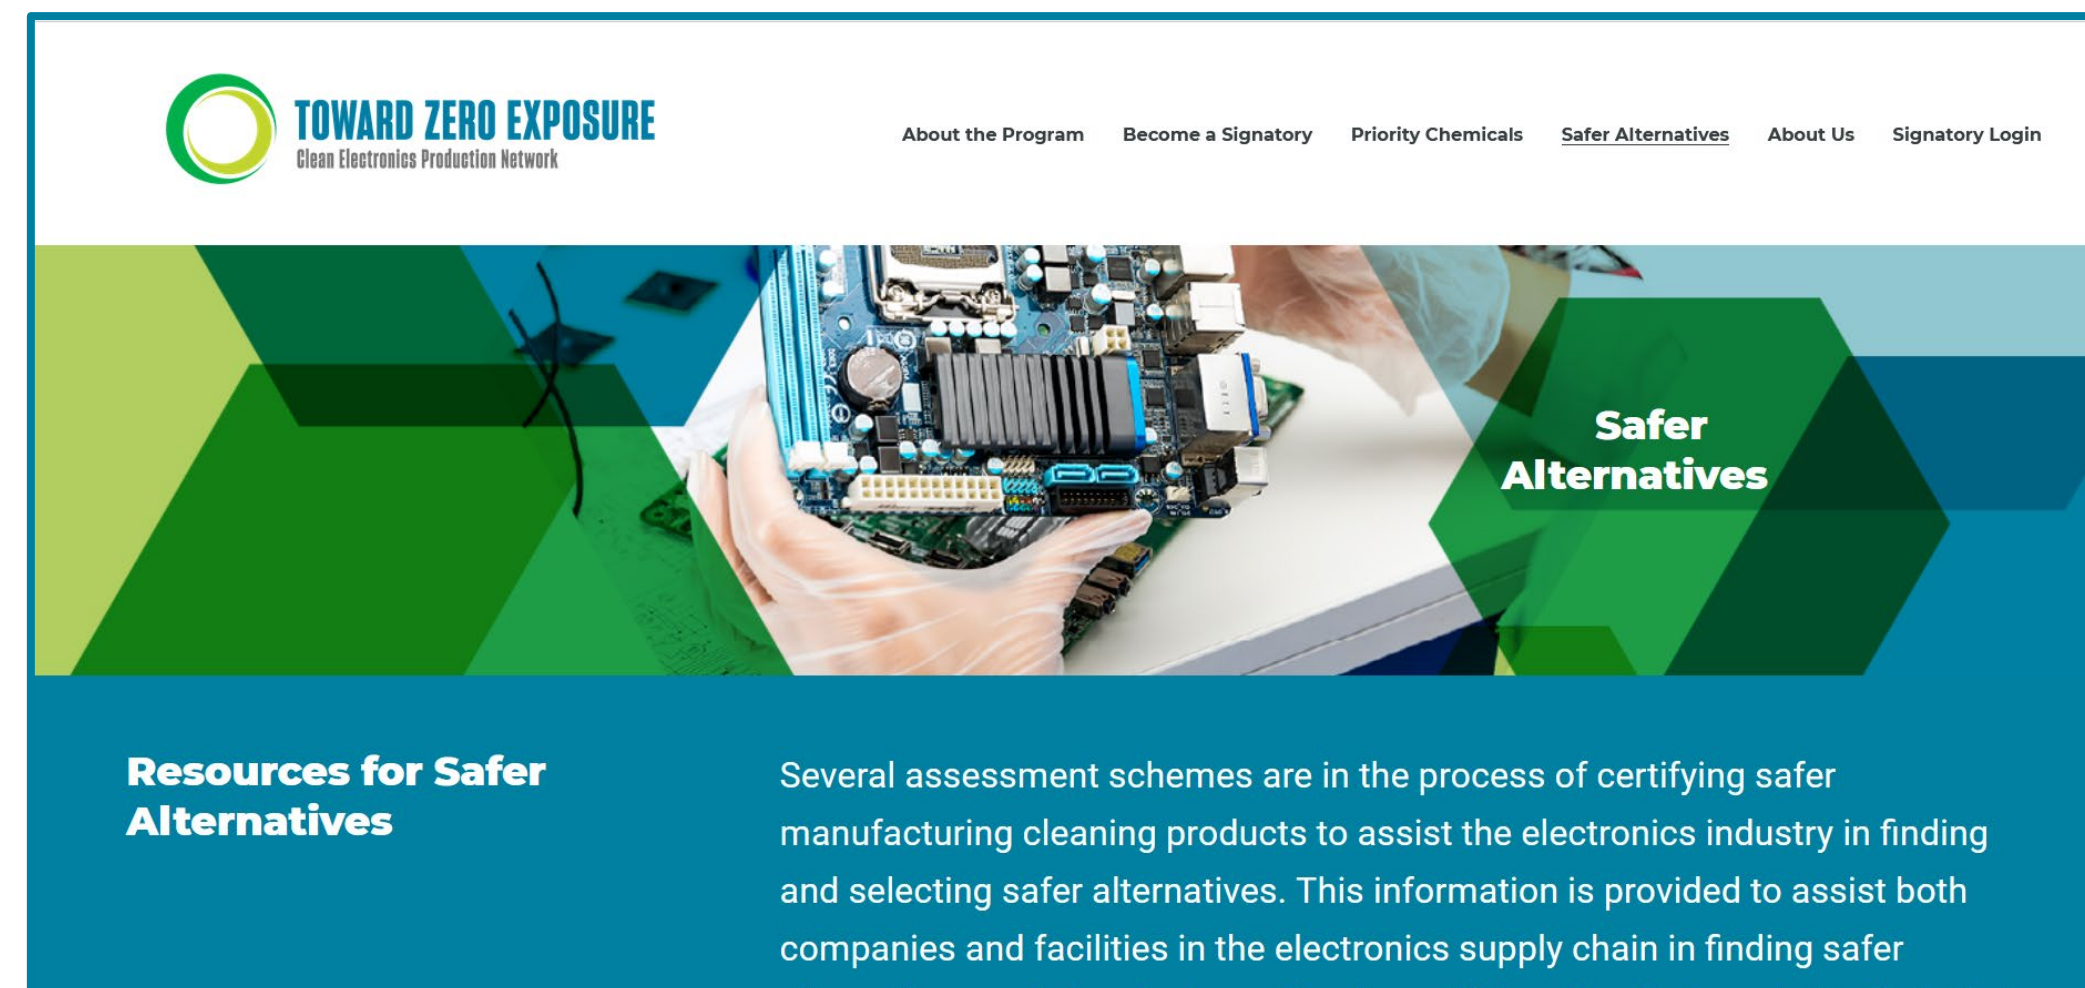

# Resources for Safer Alternatives

## Goals

- Assist the electronics industry in identifying safer chemicals/formulations
- Initial efforts focused on safer alternatives to solvents used in cleaning
- Provide collective solutions for common issues
- Help drive innovation by chemical suppliers and manufacturers toward safer chemistries

## Program Direction

- Highlight and collaborate with assessment schemes to drive both supply and demand
- Align with broader industry efforts (e.g., IPC 1402)
- Drive towards a single repository of approved cleaners

**TOWARD ZERO EXPOSURE**  
Clean Electronics Production Network

[About the Program](#) [Become a Signatory](#) [Priority Chemicals](#) [Safer Alternatives](#) [About Us](#) [Signatory Login](#)

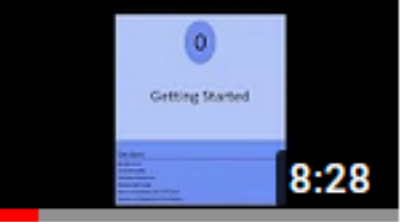

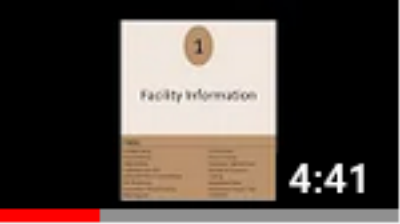

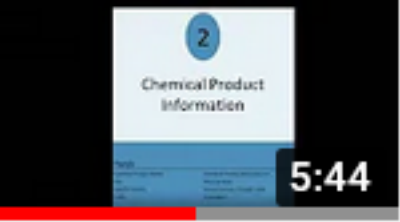

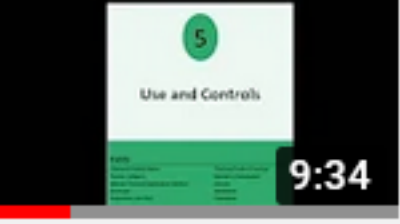

**Safer Alternatives**

**Resources for Safer Alternatives**

Several assessment schemes are in the process of certifying safer manufacturing cleaning products to assist the electronics industry in finding and selecting safer alternatives. This information is provided to assist both companies and facilities in the electronics supply chain in finding safer

# Process Chemicals Data Collection (PCDC) Tool

- Standardized reporting tool for process chemicals data thorough the electronics supply chain
- Already being used by several major brands!
- Creates common format for consistent collection of data across the supply chain
- Free and publicly available
- Enterprise platform being developed
- All data will be held securely and confidentially
- Facilities will be able to opt to share information with their customers through the platform
- Guidance and instructional videos available in 3 languages - English, Chinese and Spanish

Toward Zero Exposure:  
A Commitment Program to  
Protect Workers from  
Chemical Hazards in the  
Electronics Supply Chain

# Toward Zero Exposure Program

- Developed by the members and advisors of CEPN, a collaborative multi-stakeholder innovation network
- Unites companies throughout the electronics industry in a journey to reduce worker exposure to hazardous chemicals through collective action
- Signatories share a strong and valuable commitment to deploying the highest practices in protecting workers from hazardous process chemicals
- Program provides resources, tools and structure to boost the credibility of safety claims
- Launched with founding Signatories Apple, Dell and HP, Inc.

# Program Overview

- Prioritize the elimination or substitution of priority chemicals with safer alternatives and continue to protect workers until that is achieved
- Collect data on the process chemicals used in manufacturing electronic products
- Advance worker engagement and participation as an essential element of a best-in-class safety culture for managing process chemicals
- Reach deeper into the overlapping and complex electronics supply chain to reduce worker exposure to hazardous chemicals
- Verify and report to ensure progress toward implementing the commitments to strengthen accountability to workers, the public and other stakeholders

# PROGRAM COMMITMENTS

## #1 Eliminate Exposures to Priority Chemicals

Protect workers from exposure to Priority Chemicals in the electronics supply chain, prioritizing elimination or substitution with safer alternatives and protecting workers until that is achieved

## #2 Process Chemical Data Collection

Collect data on company and supplier facility use of process chemicals to support collective mapping across supply chains

## #3 Worker Engagement and Participation

Build safety systems and culture around process chemical management through support for the maturation of governance systems that protect the health of workers, where workers are consulted, informed and actively participating

## #4 Reach Deeper into Tiers

Work with selected suppliers to join the Commitment Program to reduce worker exposure to toxic chemicals in the extended electronics supply chain

## #5 Verification and Reporting

Ensure progress toward implementing the Commitments through verification and annual reporting to workers and the public

## #6 Continuous Improvement

Drive ongoing improvement across all commitment areas

# Priority Chemicals

- Process chemicals prioritized for elimination or substitution in the electronics industry supply chain
- First round of Priority Chemicals contains 9 solvents used as cleaners in electronics manufacturing
  - 1-Bromopropane (CAS #106-94-5)
  - Benzene (CAS #71-43-2)
  - Dichloromethane (Methylene Chloride) (CAS #75-09-2)
  - Methanol (CAS #67-56-1)
  - n-Hexane (CAS #110-54-3)
  - N-Methyl-Pyrrolidone (NMP) (CAS #872-50-4) – Exempted Conditional Use for photoresist stripping
  - Tetrachloroethylene (CAS #127-18-4)
  - Toluene (CAS #108-88-3)
  - Trichloroethylene (CAS #79-01-6)
- Selected from CEPN member companies' Manufacturing Restricted Substances Lists (MRSL) and then evaluated by the Technical Review Board and screened:
  - Meets CEPN High Hazard Criteria
  - Can be replaced by available and potentially viable safer alternatives
- Additional rounds of priority chemicals will be identified in the future

# Why Are Companies Joining?

- Demonstrate commitment to human rights and protecting workers from exposure to toxic chemicals
- Proactively move the electronics industry to safer supply chain
- Drive greater efficiency and effectiveness in protecting workers from exposure to process chemicals throughout the supply chain
- Prepare for increasing focus of potential regulatory and purchasing requirements on process chemicals
- Effect systemic change as an alliance of stakeholders with a unified vision
- Opportunity to drive business through market differentiation and competitive advantage
